Chlorophyll *a* and *b* were determined using a spectrophotometer (Shimadzu UV-1601U) after extraction with 80% methanol. The concentration of chlorophyll *a* and *b* was calculated using the following equations: chlorophyll *a* (mg g⁻¹) = 12.72 × OD₆₆₅ - 2.59 × OD₆₄₆ and chlorophyll *b* (mg g⁻¹) = 22.9 × OD₆₄₆ - 7.32 × OD₆₆₅, where OD₆₆₅ and OD₆₄₆ are the optical densities at 665 and 646 nm, respectively (Arar and Collins 1987).
